Experience

- AGI House | Lead Researcher** | Bay Area, CA Oct 2025 –
Write technical primers and research briefs for event sponsors and participants (20+ published in the past year), [host podcast interviews](#) and [research spotlights](#), write [thought pieces](#), host [paper reading groups](#), started the inaugural [Fellows](#) program, design events to guide builders to explore new tools from key players across the tech stack and research community on frontier topics.
- Lazard | Restructuring Investment Banking Analyst** | Chicago, IL July 2025 –
It's like the Emergency Room, but for distressed companies. The worst day of crisis in a CEO's career is our Tuesday morning.
- KKR | Credit Summer Analyst** | San Francisco, CA May 2024 – Aug 2024
Credit investing is great and fun, but the most interesting thing that happened was when one of our portcos went bankrupt.
- Jia Liu Lab | ML Research Assistant** | Cambridge, MA Oct 2022 – June 2023
Rebuilt the lab's electrophysiology pipeline in SpikeInterface: spike sorting and functional-connectivity reconstruction from chronic 32-channel mesh probe recordings, using GLMCC to infer monosynaptic connections in mouse motor cortex.
- Earlier** 2020 – 2023
2023 – Software Engineering Intern at **Nomura**: Options pricing tool over live Bloomberg data.
2022 – Software Engineering Intern at **Caterpillar**: Path Tool in Matlab/Simulink for rigid-body simulations of bladed vehicles.
2021 – Software Engineering Intern at **Deloitte**: Hardware security red-teaming; designing GNURadio flowgraphs for SDRs.
2020 – 5G/IoT Research Assistant at the **Broadband Media Wireless Lab, Dr. Ray-Guang Cheng**: Built ML platform to optimize energy consumption for physical dispensers on campus; eval'd OFDMA resource allocation in IEEE 802.11ax.
-

Education

- Harvard University** Cambridge, MA
Dual Master's & Bachelor's in Computer Science. Bachelor's in Economics. Honors. GPA: 3.8/4.0. 2021 – 2025
Computer Science Teaching Fellow: CS 51 (Computational Design), CS 136 (Econ & Computation), CS 182 (Artificial Intelligence)
- Thomas Jefferson High School for Science and Technology** | ACT: 36 | SAT: 1580 Alexandria, VA
-

Research

- Conformity and Perception on Misalignment in Multi-Agent Systems** Aug 2026
Designed and ran a multi-model agentic-safety study (Claude, GPT, Qwen, Llama) on how audience, peer behavior, and post-hoc questioning shape whether LLM agents violate an operating policy and report their actions honestly.
- UberStable: Formulating the Rideshare System as a Stable Matching Problem** | <https://arxiv.org/abs/2403.13083> Dec 2023
Published at 2024 ACM Conference on Equity and Access in Algorithms, Mechanisms, and Optimization. Built a novel matching algorithm that both maximized revenue and achieved pareto optimality for individual driver preferences.
- Multi-Dimensional Preference Ordering for a Stable Compute Marketplace** Jan 2025
Advised by Professor Yiling Chen. Proposed multi-dimensional preferences with stochastic noise & indifference groups for compute marketplaces (DeepMarket, CrowdFL)
- Price Incentive Model Efficiency System (PRIMES)** Dec 2023
Proposed strategyproof pricing mechanism for the Oort FL agent selection process. Implemented on Flower FL with backchannel gRPC server. Achieved higher accuracy per round (1.5-2x), faster times to convergence (10-33%) for clients with data corruption.
- Other**
2025 – Countering the Winner's Curse in Aggregated-Signal Common-Value Auctions (advised by Prof. Yannai Gonczarowski)
2025 – Fairness in Multi-Round Online Gaming with Strategic Agents (advised by Prof. Cynthia Dwork)
2024 – RN-SOAR: Robust Nurse Scheduling in the Online Setting using Adaptive RL (advised by Prof. Milind Tambe)
2023 – STRESS: Stationary T-stop Railing Emergency Sirening System (advised by Prof. Jim Waldo)
-

Builds

- Spectre Red-Teaming for Defense** | <https://github.com/JessSanChen/SpectreRedTeaming> Oct 2024
\$25,000 1st-prize winner of SCSP AGI House Hackathon, sponsored by former Google CEO Eric Schmidt. Created multi-agent system to generate red-team prompts across defense applications and attack styles. Jailbroke Air Force Research Lab's LLM.
- CrisysSync** | <https://github.com/JessSanChen/CrisisSync> Feb 2025
\$4,000 1st-prize winner of the AI Agents Hackathon. Built a multi-agent disaster response system that clustered social media alerts into actionable information to inform authorities, as well as a judge verifier that cross-references with media outlets.
- Cybersecurity Stealth Startup** Jan 2025 – Aug 2025
Incubated in Belfer Center's QLab Defense Accelerator; YC-backed (not joined); finalist for \$100K Perplexity seed fund pitch.
Automated penetration testing and red teaming platform. ~\$75k ARR from gov. orgs / companies in highly regulated industries.
-

Skills: C++, Python, R, Java, SQL, Pandas, NumPy, Git, Next.js, TensorFlow/Keras, MongoDB, React, Flask, PyTorch, gRPC. **Languages:** Mandarin (fluent), Spanish (adv.), Arabic (learning) **Interests:** Dancing, digital art, motorcycling, free-diving.
